

Mario Muciño Flores

Backend Software Engineer | Java | Spring Boot | Microservices | Cloud

Mexico | mario.mucino.flores@gmail.com | +52 1 33 1453 6727 | [LinkedIn](#)

PROFILE

Software Engineer with 7+ years of professional software development experience across international projects, specializing in backend development, microservices, ETL, and cloud-native applications. Strong hands-on experience with Java and Spring Boot, distributed systems, CI/CD, observability, and enterprise platform modernization across GCP, AWS, and Red Hat OpenShift environments. Additional experience building React/Next.js tracking solutions and AI-assisted engineering tools using Python and LLM SDKs.

PROFESSIONAL EXPERIENCE

O'Reilly

Nov 2023 – Present

Software Engineer

- Led the refactoring of microservice endpoints and migrated legacy US processes to the Mexico eCatalog platform using Java and Spring Boot.
- Implemented end-to-end user search tracking with Google Analytics and Google Tag Manager in React/Next.js frontends, supporting data-driven product decisions for new catalog sections.
- Automated ETL deployment workflows and configured GCP Cloud Monitoring dashboards to improve system observability, reliability, and incident response.
- Developed AI auditing agents with Python and LLM SDKs to automate code review checks and enforce naming conventions across cross-functional engineering teams.

IBM

Oct 2021 – Apr 2023

Software Engineer

- Migrated legacy monolithic applications to a cloud-native microservices architecture on Red Hat OpenShift, modernizing the IBM Z product acquisition experience.
- Established CI/CD pipelines and standardized application logging, reducing on-call bug resolution time by 20%.
- Integrated MQ messaging to support reliable asynchronous communication between distributed services and proactively remediated security vulnerabilities to support enterprise compliance.

Hexaware

Oct 2020 – Oct 2021

Software Engineer

- Enhanced finance-focused microservices applications using Spring and React, optimizing service consumption and accelerating feature delivery within Agile teams.

Payco Technology (IBM)

Jan 2019 – Oct 2020

Application Developer

- Optimized ETL processes for supply chain applications using Java, Spring, DB2, and shell scripts, improving data pipeline efficiency and production system reliability.

TECHNICAL SKILLS

Core Backend: Java, Spring Boot, Spring Batch, SQL, Microservices architecture, ETL development

Frontend: React, Next.js, JavaScript, Google Analytics, Google Tag Manager

Data & Messaging: PostgreSQL, DB2, Solr, MQ messaging systems

Cloud & Infrastructure: GCP, AWS, Red Hat OpenShift, Kubernetes, Docker, CI/CD, UNIX, Linux, Vercel

Engineering & AI: Git, GitHub, GitFlow, Agile methodologies, GitHub Copilot, Claude Code, LLM SDKs, AI agents

EDUCATION

Bachelor's Degree in Electronic Engineering | ITESO | 2018

Java Back-End, Generation Program | 2018
